

Movac Mobile Vacuum Services Ltd. Finalist 2020 Energy Excellence Awards

CALGARY, AB (May 6, 2020) - Movac Mobile Vacuum Services Ltd. (Movac), Alberta's leading provider of vacuum, water, hydrovac services and in the removal and transportation of industrial fluids and waste, is thrilled to announce that our company has been recognized as a finalist in the second annual *2020 Energy Excellence Awards* in the *Environmental Excellence - Water* category.

"We continually strive to be recognized as a leader in environmental excellence. This award nomination is a testament to our commitment to bring environmental practices to the forefront of our business operations," said Nicole Chacalias, CEO, Movac. "We understand how critical environmental stewardship, innovation, and technology all are in providing value to the clients we support."

The Daily Oil Bulletin's Energy Excellence Awards program recognizes companies who have 'best practices in the Canadian energy industry.' Evaluating such factors as excellence in project execution, environmental performance, technical innovation as well as community and business collaboration.

Movac's nomination for the Environmental Excellence award was based on an initiative developed for a key project with Suncor. Our team, led by our Operations Manager, Don Foley and executed by key employees onsite in collaboration with Suncor, recognized the opportunity to further support and optimize water sustainability practices for a project that involved substantial volumes of fresh water to clean out the equipment used in drilling operations.

Movac's goal was to limit the amount of fresh water required to wash out equipment used for this project by designing, fabricating, testing and then operating a water recirculation system that captured, filtered and reused all fluids.

Movac's innovative solution supported the ongoing water sustainability initiatives of Suncor and had a substantial impact from both a cost savings and safety perspective.

"We are always looking for ways to optimize our operations from both an environmental and cost perspective," said Cory Johnson, Manager Drilling Operations, Suncor Energy Inc. "We couldn't be more pleased to work with Movac on this initiative, and to further integrate this leading-edge environmental solution into our operations."

Overall, this initiative had a positive impact on the environment with a focus both on water sustainability and reduction in emissions.

The 2020 Energy Excellence Award winners in the Environmental Excellence category will be announced via webinar on May 21, 2020.

About Movac Mobile Vacuum Services Ltd.

In February 1995, founder Brad Chacalias started Movac's operations with a single vacuum truck. Today, headquartered in Calgary, Alberta, Movac's core values have remained unchanged. Movac is a family owned business that has chosen to look beyond its own service offerings and to embrace innovation when it comes to adding value for its clients.

Working to the highest standards, Movac leverages its expertise and an enviable track record to deliver best-in-class service to help its customers achieve sustained value. Movac's vision is to be the leading provider of service and safety excellence in managing the cleanup, transport and disposal of industrial fluids and waste.
